Work Log Table

Date	Number of Hours	Description of Work done
March 18	2	Searched for UIs that would be best for Search page and started implementing it.
March 19	3	Completed the Search Page UI of the project that includes filters and sort options.
March 20	4	Searched additional features like Keyword Search then added onChange and onSubmit functions on Search Page.
March 22	1	Worked on searching Home page and About Page UI.
March 23	1	Worked on Progress Report 3.

Description of work done:

I researched and explored various UI designs that would be best suited for the Search Page. After finalizing a suitable UI approach, I started implementing the structure and design elements.

I then completed the development of the Search Page UI, incorporating essential features such as filters and sorting options to enhance usability and functionality. This ensured a seamless and efficient search experience for users.

Further improvements were made by researching additional features like Keyword Search. I integrated onChange and onSubmit functions to refine search interactions, making the search process more dynamic and responsive.

In addition to working on the Search Page, I also focused on designing the UI for the Home Page and About Page, ensuring consistency in visual aesthetics and functionality across different sections of the project.

Finally, I worked on preparing **Progress Report 3**, documenting the current status, completed tasks for the project. This report helps track progress and provides valuable insights into upcoming improvements.

I faced few problems while doing my tasks, they are as follows:

While implementing the Search Page UI, selecting the most intuitive layout with effective filters and sorting options required extensive research and testing. Ensuring a seamless user experience while maintaining responsiveness across different devices was a challenge.

Integrating the Keyword Search feature and handling onChange and onSubmit functions posed some difficulties, especially in optimizing search performance and ensuring accurate results. Debugging minor issues related to event handling and state management took additional time.

Repo Check-in

The files/folders I have checked into the repo are as follows:

- Search page UI:
 - Implementation/ecoTots/client/src/App.jsx
 - Implementation/ecoTots/client/src/pages/Search.jsx
 - Implementation/ecoTots/client/src/components/Header.jsx

- Adding functions to Search page:
 - Implementation/ecoTots/client/src/pages/Search.jsx
